

VAYAL FOODS PRIVATE LIMITED

BOARD OF DIRECTORS MEETING — TRANSCRIPT OF PROCEEDINGS

Financial Year Reviewed: FY 2025-26 **Meeting Reference:** BM/FY27/01 (Annual Review Sitting) **Date:** Saturday, 18 April 2026 **Time:** 10:00 – 12:10 **Location:** Corporate Board Room, Registered Office, SIDCO Industrial Estate, Kurichi, Coimbatore

Present:

Name	Role	Referred to in transcript as
R. Meenakshi Sundaram	Managing Director	RMS
Divya Sundaram	Director – Operations & Product	DS
A. Karthikeyan	General Manager – Sales & Marketing	AK
K. Lakshmanan	Manager – Finance & Accounts	KL
M. Iqbal Basha	Procurement Manager	IB
S. Ravichandran	Plant Manager	SR
Dr. P. Nandhini	Quality Assurance Manager	PN
S. Bhuvaneswari	HR & Admin Executive	SB
Aakash Menon	E-commerce Manager	AM
G. Priya	Executive Assistant (recording)	—

Transcript prepared from the audio recording by G. Priya. Verbatim, lightly edited for false starts and cross-talk. This transcript accompanies, and does not replace, the formal minutes.

[Recording begins 10:02]

RMS: Good morning, everyone. Priya is recording today, as we agreed — with the FY27 plan approved, I want this annual sitting captured fully, not just as minutes. So speak normally, but speak completely. Let's start where we always start. Lakshmanan, the year.

KL: Good morning, sir. The year closed at ₹836 lakhs of revenue against ₹755 last year. That's 10.7 per cent growth. Gross profit ₹297.4 lakhs, which is 35.6 per cent, up from 34.6 last year. EBIT ₹58.4 lakhs, profit before tax ₹39.4, and net profit ₹29.2 lakhs after tax of ₹10.2.

RMS: Against the plan?

KL: The revenue plan for the year was ₹830, so we finished slightly ahead. Month-wise, though, the shape is worth looking at. October was our best month at ₹78.9 lakhs. January was ₹76.4 with Pongal. February and March came in at ₹64.7 and ₹64.3.

RMS: February and March were below April.

KL: Below April, yes. April opened at ₹66.2. So the year ended below where it began, in monthly terms, even though the year as a whole grew.

AK: February and March are always our leanest, sir. There's no festival between Pongal and Tamil New Year, and we deliberately held primary billing in the last week of March for the year-end cut-off. Last year showed the same shape — ₹58.4 and ₹58.3 in the same two months.

KL: That's correct, the seasonality is consistent year on year. I'm only noting that the growth rate in those two months was around 10.3 to 10.8 per cent, same as the full year, so the pattern held rather than improved.

RMS: All right. Cash.

KL: We closed the year with ₹34 lakhs of cash and bank against ₹41.3 at the start. Net movement for the year was minus ₹7.3 lakhs. Operating activities generated ₹49.7 lakhs, we spent ₹26 on capex, and financing took ₹31 — that's ₹24 of term loan repayment, ₹19 of interest, offset by ₹12 of additional drawing on the cash credit.

RMS: The cash credit is at what level now?

KL: ₹94 lakhs drawn against the ₹110 limit as on 31 March. Drawing power was ₹101.4, so we were within it. In December we were at ₹88.4. The facility was renewed in February at the same limit and the same rate, 10.75.

RMS: So through the year the utilisation moved from 82 to 94.

KL: Yes. The working capital cycle for the year worked out to 80 days, against 76.5 last year. Receivable days went from 49.8 to 50.6. Inventory days from 79.9 to 82.7. Payables held around 53.

DS: The inventory number — how much of that is raw material versus finished goods?

KL: Closing inventory was ₹122 lakhs total. Raw material ₹42, packaging ₹14, WIP ₹8, finished goods ₹58. Last year finished goods was ₹51.5, so finished goods grew ₹6.5 lakhs year on year, roughly in line with revenue. Raw material grew ₹5 lakhs, and part of that is the November forward commitment Iqbal made on ragi, which we were still carrying at year end.

IB: I'll come to that when we reach procurement, sir.

RMS: Fine. Receivables — the March number.

KL: ₹116 lakhs at close, against ₹103 at the start of the year. The month of March itself is the story there. We billed ₹69.4 lakhs including GST in March and collected ₹55.6. Every other

month of the year, collections ran between ₹68 and ₹83. March collections were the lowest of the twelve months by a wide margin.

AK: The billing cut-off explains part of it. Anything billed in the last week of March couldn't have been collected inside the same month — the terms don't allow it. Twenty-one days for general trade, forty-five for modern trade, up to sixty for institutional.

KL: Agreed, and I'm not attributing it to the field. I'm recording the composition. Of the ₹116 outstanding, ₹61.4 is not yet due. ₹32.7 is one to thirty days overdue. ₹14.2 is thirty-one to sixty. ₹5.1 is sixty-one to ninety, and ₹2.6 is above ninety days.

RMS: The above-ninety — what is it?

KL: Three accounts. Two general trade distributors with disputed scheme claims from Q3 that Reena's team is reconciling, about ₹1.7 between them, and one institutional account, ₹0.9, where the customer's own payment cycle runs long. None of it is disputed on quality or delivery.

RMS: And by channel?

KL: Institutional carries the largest book — ₹38.2 lakhs — which is natural given it's 21 per cent of revenue on 45-to-60-day terms. General trade ₹33.6 on 21-day terms. Modern trade ₹20.9 on 45 days. The rest is e-commerce settlements and export.

DS: So institutional revenue is 21 per cent of the business but 33 per cent of the receivables.

KL: That's the arithmetic, yes. It's the terms of that channel, not a collection issue as such. Every contract we've signed there carries 45 or 60 days.

RMS: Noted. Let's hold that thought and hear the margin picture by product before we move to sales. Lakshmanan, you circulated the product P&L.

KL: Yes sir. Blended gross margin 35.6. By product: Health Mix 38.5 per cent, Cookies 41.4, Dosa Mix 37.8, Munch 40.6, Porridge Cup 39.2. Institutional Flour, 17.2 per cent.

RMS: Say the last one again.

KL: Institutional Flour, 17.2 per cent gross. On ₹141.9 lakhs of revenue it contributed ₹24.4 lakhs of gross profit. For comparison, the Porridge Cup contributed ₹19.5 lakhs of gross profit on ₹49.7 of revenue.

AK: With respect to the arithmetic, sir, the flour carries no marketing cost, no retail packaging, no scheme spend, no listing fees. The 17.2 is closer to a net figure than the retail products' 38 or 40, which still have all of that below the line. And it fills the mill on days the retail plan doesn't.

SR: That's true from my side. The P6 milling runs absorb capacity that would otherwise sit idle. The 26th to 29th and 11th to 14th of every month, the milling line is essentially a flour line for Vidyalaya and the other accounts.

KL: I don't dispute either point. I'm putting the numbers on the table so everyone carries them.

RMS: Which is what this meeting is for. Karthikeyan — sales. Take us through the year by channel.

AK: Sir. General trade ₹284 lakhs, 34 per cent of the business, grew about 8 per cent. Institutional ₹175.7, 21 per cent. E-commerce and quick commerce ₹158.8, 19 per cent, and that grew about 26 per cent year on year. Modern trade ₹100.3, 12 per cent. Export ₹66.9, 8 per cent. D2C ₹50.3, 6 per cent, grew around 24.

RMS: So the digital channels grew at two and a half times the rate of general trade.

AK: They did, from a smaller base. General trade added roughly ₹21 lakhs of absolute revenue in the year; e-commerce added about ₹33.

RMS: And the distributor network.

AK: We ended at 38 distributors against 33 at the start of Q2. Outlet coverage 3,112, up from about 2,900. Five new appointments in the year — Hosur, Palakkad, Mangaluru, and two others. Average outlet productivity is around ₹3,180 a month. Territory achievement — West TN 102.7 in Q2, and the full year came in on target across all four territories.

RMS: What did the distributor survey say? Reena ran one in March.

AK: Thirty-four of thirty-eight responded. Overall satisfaction 4.3. Highest score was field support at 4.5. The lowest score on the sheet was availability of point-of-sale material, 3.9. Claim settlement speed was 4.1 — we settle in 8.2 working days against our stated 10, and we're moving the standard to 7.

RMS: Point-of-sale at 3.9. Prabhu prints it, Selvakumar ships it — where does it sit?

AK: It goes out quarterly with regular dispatches. We're moving to bi-monthly from this quarter. The Kerala team also asked for scheme circulars in the local language — we've committed a one-pager in Tamil and Kannada with every scheme launch.

RMS: All right. Institutional.

AK: Twenty-six accounts at year end against twenty-four in December. Vidyalaya renewed in November for four quarters — 44 tonnes a quarter, rates locked. On-time delivery for the channel was 97.4 per cent across 612 scheduled deliveries. Reena's team also filed a bid on the Coimbatore school contractor tender — the 90-tonne one.

RMS: Where NutriSprout also bid.

AK: Yes. Their Hyderabad plant is 120 tonnes a month and they run it as a contract shop, so they price bulk flour differently to us. The award hasn't been announced.

RMS: When it is, bring it here whichever way it goes. Divya, anything on institutional from your side before we move on?

DS: Only that the specification requests from that channel are getting more particular. Amrit asked for 90 mesh and got it. Sunrise Bakers asked for the same in July — the trial hundred kilos goes out in August. Vidyalaya asked for a heavier sack liner in January and

we upgraded it. Each of these is small, but each one is a variant in the account master that the plant has to hold.

SR: Three flour grades became five effective grades this year, if you count the mesh variants per account.

RMS: Noted. Aakash — the digital business.

AM: Sir. Full year ₹158.8 lakhs across marketplaces and quick commerce, plus ₹50.3 on our own site. Q1 of the new year has opened well — ₹52.4 lakhs against ₹40.9 in the same quarter last year, 28 per cent up. Quick commerce specifically grew 72 per cent in Q1, ₹6.2 lakhs.

RMS: Store count?

AM: Fourteen dark stores in Bengaluru, eleven in Chennai, and the original Coimbatore set. The expansion plan on the table takes Bengaluru to 22 and Chennai to 16 in Q2. Availability across marketplaces averaged 95 per cent for the year — quick commerce is the thinner one; the CSAT survey scored availability there at 3.42, the lowest of any channel attribute we measure.

RMS: Because of stock, or coverage?

AM: Coverage more than stock. Where we're on the shelf, we hold 95 per cent availability on a five-day replenishment. But customers in pin codes served by stores not in our fill list see us as out of stock. Every expansion round closes some of that gap. There's also the platform margin — 24 to 26 per cent on those SKUs, which is the highest take rate of any channel we sell through.

KL: And which is why quick commerce revenue and quick commerce contribution are different conversations.

AM: Understood, and it's in the channel P&L I share with Lakshmanan monthly. The other numbers — D2C conversion 2.71 per cent in Q1, average order ₹1,131, repeat share 38 per cent, 612 active subscriptions on the Health Mix. Subscriptions were 494 in December, so Pongal added over a hundred.

RMS: And the organic launch?

AM: Live on Amazon from 20 April last week — sorry, 20 April 2026, so we're four weeks in as of... no, we went live 20 April, this is the 18th. Apologies — Amazon go-live is Monday. The D2C page went to pre-order this week. The campaign plan is ₹10.38 lakhs through June, launch price ₹289 against the ₹340 MRP for eight weeks.

RMS: We'll hear the result in July then. Ratings across the board?

AM: Portfolio average 4.28 across 13,092 ratings at the last count. Health Mix 4.4, Cookies 4.3, Munch 4.2, Dosa Mix 4.1, Porridge Cup 4.0. NPS from the annual survey was plus 38.2 overall. By product, Health Mix plus 44, and the Porridge Cup at plus 21.4, which is the lowest in the range.

DS: The cup is also the newest product and the smallest sample. Two hundred and fourteen survey responses. Its value-for-money score was 3.54 — sixty grams at seventy rupees is the most expensive thing we sell per gram, and the reviews say so in as many words.

AM: They do. The other recurring theme in the open feedback was pack sizes generally — 186 people asked for a smaller Health Mix pack, 168 for a bigger Munch pack. And 214 asked for millet vermicelli, which was the single most requested new product.

RMS: Which is sitting in the NPD pipeline as a co-pack trial. We'll get there. Marketing spend for the year, Karthikeyan — close it out.

AK: ₹44 lakhs, 5.3 per cent of revenue, against ₹38.5 last year. The three campaigns all closed at or under budget. Onam did 4,240 combo packs against 4,000 planned. Diwali did 7,240 hampers against 6,500, ₹25.4 lakhs of hamper revenue. Pongal delivered a blended ROAS of 7.56 and 1,406 new D2C customers at ₹320 each. The Tamil landing page converted at 3.4 against 2.6 for English — that's now a permanent asset, and Malayalam is being built.

KL: For completeness: the FY27 marketing budget is ₹52 lakhs, an 18 per cent increase against a 15 per cent revenue plan.

AK: Which the campaigns have earned, I'd argue. Every rupee of the festive spend is measured now — that wasn't true two years ago.

RMS: The measurement is why the budget went up, Karthikeyan, so you're both right. Operations. Ravi.

SR: Sir. Output for the year 405.6 tonnes against 371.4 last year. Installed capacity is 50 tonnes a month, so we averaged 68 per cent utilisation. October peaked at 38.3 tonnes, which is 77 per cent. February and March ran at around 31, about 62.

RMS: The plan for next year assumes 466 tonnes.

SR: Which is 78 per cent average utilisation on the current 50, or 67 per cent once the second FFS machine and the line work in Q2 take us to 58 tonnes nominal. The constraint isn't the same on every line, that's the thing I want on record. The dry-blend line has headroom. The RTE cup line ran a single shift all year — it has the most headroom of anything in the building. The bakery line is the tightest; in October it ran at 91 per cent of its own capacity during the hamper assembly weeks.

DS: And the hamper assembly itself consumed eleven working days of packing labour, which is why we built the dedicated assembly bay mid-campaign. That's in the Diwali closure report.

SR: Plan adherence for the year was 99.6 per cent weekly average. Rework 0.52 per cent of output, all reprocessed within the permitted window. Film wastage 1.9 against a 2.2 standard.

RMS: Downtime.

SR: Forty-one hours unplanned across the year. The two events worth naming: pulverizer 1 took an eleven-hour bearing replacement in October — the vibration check caught it before failure, which is what the check is for. And the rotary oven burner in December — nine hours across two days, planned into maintenance, after the pre-heat time had drifted from eighteen minutes to twenty-seven over six weeks.

RMS: The drift was visible for six weeks before the replacement?

SR: Visible and logged, sir. We scheduled the replacement into the December window rather than take the bakery line down in the Diwali run-up. The burner held through the peak. Whether that was the right sequencing is a fair question — the fuel consumption over those six weeks was higher, Lakshmanan will have seen it in the diesel line.

KL: Factory fuel and power came in at ₹24.8 lakhs against ₹23.1 last year, 7.4 per cent up on 9 per cent more output, so in aggregate it washed through. The monthly detail does show November and early December running heavier.

RMS: All right. The cold room is live from June — that's the current year. Dispatch?

SR: Selvakumar's numbers: D2C dispatch within 24 hours at 98.2 per cent. Institutional on-time 97.4. The loading count verification signature at the gate went in from April after the Q4 short-supply cases — fourteen cases in the quarter, ₹19,420 of value, all traced to loading counts, none to production.

RMS: Iqbal. Procurement.

IB: Sir. Raw material consumed ₹341.2 lakhs for the year. The movements to record: ragi went from ₹41.20 a kilo in July to ₹44.50 in August — 8 per cent in one cycle. We then locked 20 tonnes at ₹43.80 in November against the harvest arrivals, which covered us through January. Foxtail moved from 64 to 68 in the same window. Jaggery moved 3.6 per cent in January. Groundnut from 208 to 218.

RMS: And the packaging contract.

IB: Renewed with Coimbatore Flexipack for January to June. The P1 pouch went from ₹7.62 to ₹7.95 — 4.3 per cent. Film for the Munch from 266 to 274 a kilo. There's a polymer index clause both ways at 6 per cent. The organic pouch is a new line at ₹8.60 because of the certification panel and the eight-colour print.

KL: Between grain and packaging, input rates moved roughly 4 to 8 per cent through the year while our own price list did not move at all. The gross margin still improved 100 basis points, which came from mix — the digital channels and the retail SKUs growing faster than flour.

RMS: Say that again slowly, because it matters. Our costs went up, our prices didn't, and margin still improved because of what we sold more of.

KL: Correct. Mix carried the year.

AK: MRP revisions in this category are not simple, sir. The ₹240 Health Mix has been ₹240 since 2023. Green Grain came into Tamil Nadu quick commerce in August at ₹279 for their

500-gram mix, so the reference point above us moved up, if anything. The unbranded millers sit 25 to 40 per cent below us, as they always have.

RMS: We'll take pricing as a standing item into the October review with a proper working. Iqbal, vendors.

IB: Eleven vendors scored at the half-year review. Nallur Dairy highest at 4.8. Ashwin Paper Cups lowest at 4.1 with the FSSAI renewal copy pending — that document did come in November. The Kaveri Spice consignment in August landed six days late and moved a week of Munch production; their on-time score is 93.4, the lowest on the sheet. On dual sourcing, the one gap all year was RTE cups and lids — single vendor until Thendral Packaging cleared its third trial lot on 3 July. The first commercial order to them released on the 15th. So the policy is now clean across every category.

DS: It took from the October review to July to close that gap — eight months for one category. Worth remembering when we set the next dual-sourcing timeline.

IB: Fair, madam. Vendor qualification with three trial lots and an audit can't be compressed much below four months; the balance was scheduling on both sides. On direct sourcing — Marudham supplied 13,450 kilos in H2, 21 lots, all accepted first presentation, all paid within seven days. The FY27 indication to them is 37 tonnes including organic foxtail as a new line. Their December lots ran two to four days late with advance notice — harvest logistics at their end.

RMS: The seven-day payment to Marudham — protected, whatever the cash position?

KL: Protected. It has run at seven days on all 21 lots. It's ₹25 lakhs a year of purchases; the cash flow can carry it.

RMS: Good. Nandhini. Quality.

PN: Sir. For the year: all batches released, 99.8 per cent at first presentation. The surveillance audit in July closed with two minor observations — a filing index and the visitor register — both corrected within a fortnight. The FSSAI inspection in February closed with no major non-conformity. The mock recall in July traced back to farm lot in two hours ten minutes against our four-hour standard, with 96.4 per cent of dispatched quantity accounted for.

RMS: Complaints.

PN: Consumer quality complaints for the year were low in number — single digits per quarter reaching batch investigation. The ones that mattered: the October dosa mix case in Madurai. Retention sample conformed; the customer's pack tested at 13.4 per cent moisture against an 11 limit, with a compromised corner seal. We reset the jaw pressure on FFS machine 1, held and re-inspected 400 packs from the window — all sound. Then the February quick commerce case on the Munch — the dark store check found two weak corner seals in 96 packs of that batch, both withdrawn.

RMS: Two seal events on two different machines in five months.

PN: Two events, two machines, two different failure locations — I've looked at exactly that question. The common factor is corner sealing under higher line speeds. The seal integrity test frequency was increased both times, temporarily. The second FFS machine coming in Q2 is specified with inline seal inspection, which the current machines don't have. Until then, the manual check frequency is the control we have.

DS: And the checkweigher and metal detector record was clean all year — every pack through both, challenge tests three times a shift since the October procedure revision.

PN: Correct. One more item for the record: the swab programme found two surface results above the internal action limit in Q1 last year, both on the bakery cooling conveyor, both cleared on re-clean and retest. We doubled the swab frequency there for a month. Nothing since.

RMS: The organic line controls?

PN: First batch of the day, documented full clean before it, separate bins, traceability register linking FPC lot to finished batch. The NPOP inspection in January walked all of it. It costs us the first production slot of the day whenever an organic batch runs — Ravi plans around it.

SR: It's a full day of planning lead for that SKU. Manageable at current volumes.

RMS: Bhuvaneswari. People.

SB: Sir. We ended the year at 52. Nine joined during the year, four left — that's 7.7 per cent voluntary attrition. The two departures worth noting by name: Deepa from sales coordination in December, relocation to Bengaluru. And Sangeetha from the QA lab in April — she went to a testing laboratory in Chennai after five years with us. Her replacement joined on 8 June, so the lab ran one chemist short for about eight weeks, with Vignesh covering.

PN: We managed the test load, but external lab despatches went up in those weeks — it's visible in the QA testing cost line.

KL: About ₹0.4 lakhs of additional external testing in that window, yes.

SB: On the year's programmes: nine training programmes delivered, 11.4 hours per employee. The referral scheme launched in January produced three hires so far. The FY27 plan takes us to 59 — six additions phased through the year, requisitions opening 45 days ahead of each join date. Production plus three, and one each in sales, QA, warehouse and marketing.

RMS: The QA addition — is that on top of Sangeetha's replacement?

SB: On top, sir. It takes the department from four to five, which matches the second shift coverage the plant plan implies.

RMS: Compensation review?

SB: Completed in June as scheduled, effective 1 June. The FY27 payroll envelope is ₹168 lakhs total against ₹146.4 actual, which covers the increments and the six additions. One observation for the room: three of our eleven long-service awardees this year were from production, all eight-and-seven-year people. The people who have been here longest are on the shop floor. Whatever we plan, that's where the institutional memory sits.

RMS: Well said. Divya — NPD, and then Aakash on systems, and then I'll close with the year ahead.

DS: The pipeline as it stands. NPD-11, the organic mix, launches Monday — that's done, pending results. NPD-14, the 200-gram Health Mix trial pack — artwork approved in December, second pouch quotation came in ₹0.30 below Flexipack's ₹4.85, and we're targeting commercial launch in Q2. That answers the 186 survey requests Aakash mentioned. NPD-13, the Tangy Tomato Munch — trial 3 with the reformulated Kaveri seasoning scored 7.6 on the panel, and the cost gap narrowed from ₹2.40 to ₹1.10 a pack. Targeting Q3.

RMS: And the vermicelli.

DS: NPD-12. The most requested product we don't make, and the one we can't make in this building. Extrusion needs an extruder — it's not in the FY27 capex, which is already committed to the FFS machine, the cold room, and the vehicle. The committee's decision in December stands: a co-packed market test of 5,000 packs. Ravi shortlisted two co-packers in January; one cleared the document review, and Nandhini audits their facility next month. If the test sells, the capex conversation comes back here with data instead of survey mentions.

RMS: What does 5,000 packs tell us that 214 survey requests don't?

DS: Whether people buy it twice, sir. Requests are free.

RMS: [laughs] Put that on the boardroom wall. Aakash — systems.

AM: Quickly, sir. Marg ERP runs production, inventory and billing; the production module goes fully live at the depots in Q2, which closes the last manual register. Zoho CRM has all institutional accounts loaded and about 70 per cent of distributors — the rest by June. Unicommerce syncs every marketplace and D2C order, so there is one order book. The monthly MIS lands on the 7th working day now — December's landed on the 8th of January, to be honest, but the pattern holds. The two builds this year: barcode scanning at inward and dispatch by Q4, and the digital COA to institutional accounts with every dispatch — Nandhini and Manoj have that for Q2.

PN: The COA piece removes about 600 paper certificates a year and the filing that goes with them.

RMS: Good. Then let me close with the year ahead, and I want reactions, not nods.

The plan the Board approved is ₹961 lakhs. Fifteen per cent, against the 10.7 we just did. The capex is ₹56 lakhs against the ₹26 we just spent, and ₹31.5 of it is borrowed. Headcount to 59. Every one of those numbers is bigger than the equivalent number in the year we just

closed. So the question I want each of you to sit with — and Priya, record that I asked it — is not whether the plan is achievable. It's what, specifically, in your own area, behaved differently in FY26 than the plan assumed, and what that same behaviour does to a 15 per cent year. Lakshmanan went first today, so he can go first on this too — one item each.

KL: The cash credit moved from 82 to 94 in a 10.7 per cent year. The FY27 plan adds inventory and receivables ahead of the revenue that pays for them — the first half will draw before the second half releases. I'll bring a month-wise facility utilisation projection to the May review.

AK: General trade grew 8 in a year the company grew 10.7. The plan asks the network for more than it gave, which is why the twelve new appointments matter more than any other line in my budget. I'll bring the appointment pipeline, by name and district, to May.

AM: The digital channels can deliver their number — Q1 already ran at 28. What I'll watch is the take rate. Quick commerce at 26 per cent margin growing 72 per cent changes the blended contribution faster than it changes revenue. The channel P&L comes monthly, as now.

SR: Four hundred and sixty-six tonnes through a building that did 405, with the new machine landing mid-year. The commissioning weeks of the FFS line are the pinch — August and September. My production plan for those months will assume the old configuration until the new one proves itself, not before.

IB: Thirty-seven tonnes from Marudham is 42 per cent more than they've ever supplied us. I'm going to Karur in the first week of May to walk their acreage plan with them before I write it into ours.

PN: More volume, more line speed, a new machine, and six new people on the floor. The training file and the line clearance discipline are what hold quality steady through that. The July audit lands in the middle of it. I'll table the audit-readiness calendar in May.

SB: Six hires with 45-day lead times means the first requisition is already late if the Q1 join is to happen. It opened on 5 June — last year. This year's first one opens Monday. Recruitment is the one plan item where a missed month can't be recovered by working harder later.

DS: And mine: the survey told us what people want next — smaller packs, bigger packs, vermicelli, spicier. All four are in motion. The discipline is launching them in the order the pipeline supports rather than the order the requests arrived. I'll hold that line.

RMS: Then we all know what May looks like. Priya, list those eight commitments in the minutes with owners and dates.

Two last things before we rise. First — 20 July, I'm walking both shifts on the floor. Anything anyone in this room hears from their teams before then that should reach me directly, let it reach me directly. Second — this company turns ten next year. The year we just closed would have seemed like fantasy in that shed on Trichy Road. Whatever the

numbers do, we made 405 tonnes of honest food last year and put our name on every pack of it. Thank you all. Meeting closed.

[Recording ends 12:08]
