

DS-04 — Customer Cohort Performance & Retention

Dataset ID: DS-04

Purpose: Provide cohort evidence for determining whether customer acquisition creates durable commercial value.

Instruction alignment: Supports cohort performance, retention economics, customer lifetime value, first-order quality, and distinguishing acquisition volume from customer quality.

Provenance & modelling note

This is a synthetic quantitative extension created for the Vayal Foods simulation. It is designed to be internally consistent with the supplied Vayal company documents and to fill quantitative evidence gaps identified by the strategy/instruction documents. It must not be treated as an audited source document. Known company totals are preserved where stated; newly introduced granular fields are modelling data.

Monthly First-Purchase Cohorts

Cohorts are defined by first recognised purchase month. 90-day, 180-day and 365-day metrics are shown only where the cohort has had enough observation time; incomplete cohorts should not be treated as full-window cohorts.
