

DS-05 — Marketing Campaign & Attribution Performance

Dataset ID: DS-05

Purpose: Provide campaign-level quantitative evidence for marketing efficiency, scale, customer acquisition, retention, experimentation and incrementality.

Instruction alignment: Directly supports marketing efficiency, CAC, ROAS, attribution vs incrementality, campaign targeting, product/channel selection and the ₹10 lakh implementation constraint.

Provenance & modelling note

This is a synthetic quantitative extension created for the Vayal Foods simulation. It is designed to be internally consistent with the supplied Vayal company documents and to fill quantitative evidence gaps identified by the strategy/instruction documents. It must not be treated as an audited source document. Known company totals are preserved where stated; newly introduced granular fields are modelling data.

Frozen totals: campaign budget ₹561 lakh, campaign spend ₹453 lakh, attributed revenue ₹2,925 lakh and attributed orders 53,405. The large attributed-revenue figure intentionally reflects an attribution layer rather than company recognised revenue.

Campaign-Month Performance Records

There are 92 campaigns represented across 163 campaign-month records. Attributed revenue follows the company's declared last-touch-style reporting layer; attributed revenue is not automatically incremental revenue.
