

Doc 12 Participant Quick Reference and RAG Navigation

PARTICIPANT QUICK REFERENCE & RAG NAVIGATION

Consumer Electronics Growth Challenge

Document 12 | Textual RAG Knowledge Base

1. PURPOSE

This document is the final navigation and quick-reference layer for the textual RAG knowledge base.

It does not replace the detailed documents or quantitative datasets.

Its purpose is to help a participant quickly identify where to look when a strategic question arises.

2. THE KNOWLEDGE BASE STRUCTURE

The textual knowledge base is organised into twelve documents covering the company's business context, commercial model, customers, products, channels, marketing, B2B, operations, finance, competition, strategy, and final navigation.

Documents 1–8 establish the business and commercial context.

Documents 9–12 provide financial, competitive, strategic, and navigation frameworks.

Quantitative CSV files remain the authoritative source for numerical analysis.

3. WHEN TO USE THE QUANTITATIVE DATA

Use the CSV datasets whenever the question requires an exact historical number.

Examples include:

- Revenue
- Orders
- Units
- AOV
- Customer counts
- Product-level performance
- Channel performance
- Regional performance
- Cohort metrics
- Customer-product relationships
- Marketing metrics
- B2B pipeline or account figures

The textual RAG documents should explain what the numbers mean and how they should be interpreted.

4. WHEN TO USE THE TEXTUAL RAG

Use the textual documents when the question is about:

- How the business works
- What a channel represents
- How customers behave conceptually
- How marketing works

- How B2B works
- How operations constrain growth
- Financial principles
- Competitive considerations
- Strategic decision-making
- How to structure a recommendation

The RAG should provide context around the numerical evidence.

5. DOCUMENT 1 — COMPANY & BUSINESS CONTEXT

Use Document 1 for the broad understanding of the company, its business model, commercial environment, and foundational context.

Typical questions:

- What kind of company is this?
- What does the company sell?
- Who does it serve?
- How does the business create value?
- What are the major components of the business?

6. DOCUMENT 2 — PRODUCT & PORTFOLIO CONTEXT

Use Document 2 for product-level qualitative understanding.

Typical questions:

- What products are in the portfolio?
- What customer needs do they address?
- Which products can be complementary?
- How should product roles be interpreted?

Exact product performance should be taken from the quantitative data.

7. DOCUMENT 3 — CUSTOMER & SEGMENT CONTEXT

Use Document 3 for customer behaviour and segmentation context.

Typical questions:

- What customer segments exist?
- How should lifecycle stages be interpreted?
- What is the difference between acquisition, retention, and reactivation?
- How should customer-product relationships be considered?

Exact customer counts, lifecycle distributions, and customer metrics should come from the quantitative datasets.

8. DOCUMENT 4 — CUSTOMER JOURNEY & RETENTION

Use Document 4 for customer lifecycle, journey, retention, repeat behaviour, and relationship development.

Typical questions:

- How can customers move through the lifecycle?
- Where can retention interventions occur?

- What does reactivation mean?
- How can customer relationships create additional value?

9. DOCUMENT 5 — SALES & CHANNEL PLAYBOOK

Use Document 5 for channel strategy.

The company's principal commercial channels are:

- Company Website
- Amazon
- Flipkart
- Offline Retail
- Corporate / B2B

Typical questions:

- Which channels provide reach?
- Which channels provide customer ownership?
- How should marketplace and direct channels differ?
- How should channel economics be interpreted?

Exact channel performance should be taken from the quantitative data.

10. DOCUMENT 6 — MARKETING STRATEGY & PLAYBOOK

Use Document 6 for marketing strategy.

Typical questions:

- How should acquisition be approached?
- How should retention and reactivation work?
- What is cross-sell marketing?
- How should campaigns be evaluated?
- What is the difference between attribution and incrementality?
- How should the marketing budget be used?

11. DOCUMENT 7 — B2B BUSINESS & SALES PLAYBOOK

Use Document 7 for organisational sales and account strategy.

Typical questions:

- What types of B2B accounts exist?
- How does the B2B sales cycle work?
- What is the difference between pipeline and revenue?
- How can existing accounts be expanded?
- How should dormant accounts be approached?

Exact account, pipeline, deal, and revenue figures should come from the B2B datasets.

12. DOCUMENT 8 — OPERATIONS, SUPPLY CHAIN & FULFILMENT

Use Document 8 when a strategy affects physical execution.

Typical questions:

- Can inventory support the strategy?
- What supplier constraints matter?
- Can warehouses absorb additional demand?
- What happens if order volume increases?
- How do returns affect operations?
- What operational bottlenecks could prevent growth?

13. DOCUMENT 9 — FINANCE & COMMERCIAL PRINCIPLES

Use Document 9 for economic interpretation.

Typical questions:

- How should revenue be interpreted?
- What is the significance of cancellations and returns?
- How should AOV be interpreted?
- How should marketing investment be evaluated?
- What is incremental revenue?
- How should the ₹10 lakh implementation budget be considered?

Exact financial outcomes should be calculated from the quantitative datasets.

14. DOCUMENT 10 — COMPETITIVE & MARKET CONTEXT

Use Document 10 for external and competitive thinking.

Typical questions:

- Who or what might compete with the company?
- How can differentiation work?
- What are the risks of price competition?
- How should marketplace competition be considered?
- What external research should be conducted?

Current external market claims should be verified separately when required.

15. DOCUMENT 11 — STRATEGY DEVELOPMENT & DECISION FRAMEWORK

Use Document 11 when turning evidence into a recommendation.

Typical questions:

- How do I move from diagnosis to strategy?
- Which growth lever should I prioritise?
- How should initiatives be scored?
- How should pilots be designed?
- What should the implementation roadmap look like?
- When should an initiative be stopped, modified, or scaled?

16. THIS DOCUMENT — QUICK NAVIGATION

If the question is about the COMPANY → Document 1.

If the question is about PRODUCTS → Document 2 + quantitative product data.

If the question is about CUSTOMERS → Document 3 + quantitative customer data.

If the question is about RETENTION / LIFECYCLE → Document 4 + DS-02 / DS-04.

If the question is about CHANNELS → Document 5 + quantitative channel data.

If the question is about MARKETING → Document 6 + quantitative marketing data.

If the question is about B2B → Document 7 + B2B quantitative data.

If the question is about OPERATIONS → Document 8 + relevant operational data.

If the question is about FINANCIAL ECONOMICS → Document 9 + quantitative financial data.

If the question is about COMPETITORS / MARKET → Document 10 + verified external research.

If the question is about WHAT TO DO → Document 11 + all relevant evidence.

17. HOW TO ANSWER A STRATEGIC QUESTION

A strong answer should normally follow this sequence:

1. Establish the relevant baseline.
2. Identify the problem or opportunity.
3. Diagnose the likely cause.
4. Identify the relevant growth lever.
5. Check the quantitative evidence.
6. Check operational feasibility.
7. Check financial economics.
8. Consider competitive response.
9. Define the intervention.
10. Define the implementation plan.
11. Define measurement.
12. Define scale / modify / stop conditions.

18. EVIDENCE HIERARCHY

When information appears to conflict, do not silently invent a resolution.

Use the most authoritative source available for the specific question.

For exact historical numbers, use the validated quantitative datasets.

For qualitative company rules and definitions, use the relevant textual source.

For current external market conditions, use verified external research.

If two authoritative sources genuinely conflict, flag the contradiction rather than hiding it.

19. DO NOT MIX DEFINITIONS

Important distinctions must be preserved.

Recognised revenue is not the same as quoted transaction value.

Cancelled transactions are not recognised revenue.

Attributed revenue is not automatically incremental revenue.

Pipeline is not recognised revenue.

Potential market size is not company revenue.

Customer acquisition is not the same as customer retention.

Channel performance is not the same as marketing performance.

An efficient campaign is not automatically scalable.

20. STRATEGY QUALITY CHECK

Before finalising a recommendation, ask:

- Is the problem clearly defined?
- Is the evidence sufficient?
- Is the proposed mechanism causal and understandable?
- Is the strategy financially viable?
- Is it operationally feasible?
- Can the company execute it within the available timeframe?
- Does it fit the ₹10 lakh implementation budget where relevant?
- Is the expected impact measurable?
- Are the major risks acknowledged?
- Is there a clear reason to scale or stop?

21. FINAL PRINCIPLE

The purpose of the RAG is not to tell the participant what answer to submit.

It is to ensure that the participant can understand the company deeply enough to make an informed decision.

The participant should use the textual knowledge to understand the business, the quantitative datasets to prove the case, and the strategic framework to convert evidence into action.

The strongest recommendation is therefore not the one with the most information. It is the one that uses the right information to make the right decision.

22. FINAL DATA DISCIPLINE

Never manufacture a number because a number appears useful.

Never convert an assumption into a fact without labelling it.

Never treat a forecast as historical performance.

Never treat a pipeline opportunity as realised revenue.

Never treat attribution as proof of causation.

Never ignore a material contradiction.

When a number matters, retrieve it from the appropriate quantitative source.
