

Master Business Bible v1

MASTER BUSINESS BIBLE

Consumer Electronics Growth Challenge

Version 1.0 | Current freeze: Batches 1A, 1B, 2A, 2B, 3 and 5

This is the canonical orientation layer for the synthetic business environment. It documents business architecture, dataset relationships, definitions, modelling conventions and RAG handling rules. It is not a strategy answer.

1. Strategic Case

Identify the most impactful growth opportunity within the business and recommend a practical, evidence-backed strategy capable of increasing the company's monthly sales by 15% within the next six months using an additional implementation budget of ₹10 lakh. Recommendations must be financially justifiable, operationally feasible, and supported by evidence from the company's knowledge base.

2. Design Principles / Cardinal Rules

- The objective must be understandable to an engineering student but require genuine analysis.
- The data must support many possible combinations of evidence and actions; it must not encode one hidden answer.
- The same disruptions apply to all teams; disruptions may be positive or negative.
- Both conventional and unconventional strategies can be defensible when evidence-backed.
- Relationships between datasets matter more than superficial data volume.
- Do not introduce unnecessary constraints that make the problem artificial.
- Historical data must remain distinguishable from future/scenario information.
- Frozen source data must not be silently modified.
- Document anomalies and conventions rather than silently patching them.

3. Business Architecture

4. Canonical File Inventory

5. Master Data

Products

P-008 declines historically but remains viable; P-002 shows growth; P-007 has cross-sell potential but is not a universal answer.

Channels

Regions

Customers

M-02 contains 60,000 customers. Segments: Student, Young Professional, Creator/Gamer. Actual behaviour is derived from transactions rather than master status alone.

6. DS-01 Consumer Transaction Engine

Historical period: 2025-04-01 through 2026-06-30. One row equals one product line within an order. Order_ID may repeat across lines; Order_Line_ID is unique.

Revenue convention

Recognised consumer revenue = Net_Revenue_INR for rows where Order_Status != Cancelled.

Unit_Selling_Price_INR is the realised post-discount unit price: $\text{List_Price_INR} \times (1 - \text{Discount_Pct})$. Cancelled rows may retain formula values for referential completeness but do not count as recognised revenue.

7. Customer Behaviour (DS-02 to DS-04)

44,359 customers have recognised activity. The earlier 44,614 any-status count included 255 customers whose entire DS-01 history was cancelled-only; DS-02 correctly treats those 255 as No Purchase.

DS-03 contains purchased Customer_ID × Product_ID combinations only. DS-04 uses first observed purchase month and segment; it does not assume equal observation windows across cohorts.

8. Marketing (DS-05 to DS-06)

Marketing is an evidence layer, not the sales channel itself. Campaign attribution uses a declared last-touch convention where sufficient timing/targeting information exists. DS-06 is an aggregate attribution layer and does not expose a full Campaign → Customer → Order mapping.

9. B2B (DS-07 to DS-09)

B2B is a separate, weak-but-real commercial stream. It shares products, regions and operational resources with consumer sales but has different pricing, order sizes, payment terms, sales cycles and acquisition mechanics. It is not the predetermined answer.

10. Cross-Dataset Rules

- Master IDs are authoritative and must not be renamed or regenerated.
- DS-01 is the source of truth for historical consumer transactions.
- DS-02–DS-04 are derived customer layers and must reconcile to DS-01.
- DS-05–DS-06 are historical marketing evidence and attribution layers.
- DS-07–DS-09 are a separate B2B stream and must not be inserted into DS-01.
- Do not invent KPIs when they can be calculated from source data.
- Where definitions differ, preserve the documented convention rather than silently reconciling.

11. Strategic Ambiguity

Potential evidence-backed paths include marketing efficiency, retention/reactivation, product mix, AOV/bundling, channel optimisation, regional growth, B2B expansion, pricing, customer experience and inventory/operations. No path is designated as the hidden correct answer. Strategies must satisfy the 15% monthly-sales objective, ■10 lakh implementation budget, financial justification and operational feasibility.

12. RAG Guidance

- Use this Bible as the semantic orientation layer and CSVs as evidence.
- Answer what happened before interpreting why or recommending what to do.
- Preserve exact definitions, IDs and dataset provenance.
- Distinguish historical observation from scenario assumptions.

- Prefer DS-01 for consumer transaction truth; DS-02–04 for customer behaviour; DS-05–06 for marketing; DS-07–09 for B2B.
- Do not fabricate missing values or silently blend incompatible definitions.
- Do not reveal a hidden strategy answer; the architecture intentionally supports multiple defensible strategies.

13. Pending Layers

These sections will be appended/versioned when their actual files exist. This Bible does not invent pending-layer facts.

14. Current Freeze

END OF MASTER BUSINESS BIBLE — VERSION 1.0

Layer	Status	Role
Master reference	Frozen	Products, customers, suppliers, warehouses, channels, regions, organisation, calendar
Consumer transactions	Frozen	Authoritative historical commercial activity
Customer behaviour	Frozen	Customer aggregation, affinity and cohorts
Marketing	Frozen	Campaign definitions and monthly performance
B2B	Frozen	Accounts, opportunities and historical B2B performance
Inventory / Operations	Pending	Operational constraints and supply-side evidence
Finance	Pending	Financial reconciliation and economics
Market / Competitive	Specified; not generated	External market context
Final KPI / QA	Pending	Derived decision metrics and integrity checks

File	Batch	Purpose / scale
M-01_Product_Master.csv	1A	8 products
M-03_Supplier_Master.csv	1A	12 suppliers
M-04_Warehouse_Master.csv	1A	2 warehouses
M-05_Sales_Channel_Master.csv	1A	5 channels
M-06_Region_Master.csv	1A	6 regions
M-07_Organisation_Reference.csv	1A	7 departments
M-08_Calendar_Master.csv	1A	2025-04-01 to 2026-12-31
M-02_Customer_Master.csv	1B	60,000 customers
DS-01_Transactions_2025Q2.csv	2A	Apr-Jun 2025
DS-01_Transactions_2025Q3.csv	2A	Jul-Sep 2025
DS-01_Transactions_2025Q4.csv	2A	Oct-Dec 2025
DS-01_Transactions_2026Q1.csv	2A	Jan-Mar 2026
DS-01_Transactions_2026Q2.csv	2A	Apr-Jun 2026
DS-02_Customer_Behaviour.csv	2B	60,000 customer rows
DS-03_Customer_Product_Affinity.csv	2B	204,752 purchased customer-product combinations
DS-04_Customer_Cohort_Analysis.csv	2B	Cohort × segment aggregation
DS-05_Marketing_Campaigns.csv	3	92 campaigns
DS-06_Marketing_Performance.csv	3	163 campaign-month records
DS-07_B2B_Accounts.csv	5	250 B2B accounts

File	Batch	Purpose / scale
DS-08_B2B_Opportunities.csv	5	520 opportunities
DS-09_B2B_Historical_Performance.csv	5	15-month B2B performance

ID	Product
P-001	Wireless Earbuds
P-002	Smart Watch
P-003	Bluetooth Speaker
P-004	Mechanical Keyboard
P-005	Wireless Mouse
P-006	Power Bank
P-007	Fast Charger
P-008	Neckband Earphones

ID	Channel
CH-01	Company Website
CH-02	Amazon
CH-03	Flipkart
CH-04	Offline Retail
CH-05	Corporate / B2B

ID	Region
R-01	South
R-02	West
R-03	North
R-04	East
R-05	Central
R-06	Northeast

Measure	Frozen result / convention
Orders	321,910
Transaction lines	562,371
Recognised revenue	■127.49 Cr
FY2025-26 recognised revenue	■100.57 Cr
Derived AOV	■4,056
Units/order	2.35
Multi-line order share	33.6%
Return rate	5.2% of lines with any return

Concept	Definition
Transacting customer	Customer with recognised/non-cancelled activity
Repeat customer	Observed_Order_Count ≥ 2

Concept	Definition
Observation date	2026-06-30
Very Recent	0–30 days
Recent	31–90 days
At Risk	91–180 days
Lapsed	181–365 days
Long Lapsed	366+ days
No Purchase	No recognised purchase
Lifecycle	No Purchase / New / Active / At Risk / Lapsed

Measure	Frozen result
Campaigns	92
Campaign-month records	163
Campaign budget	■5.61 Cr
Campaign spend	■4.53 Cr
Attributed revenue	■29.25 Cr
Attributed orders	53,405

Measure	Frozen result
Accounts	250
Opportunities	520
Historical B2B revenue	■5.38 Cr
Pipeline value	~■5.90 Cr
Won pipeline	~■2.13 Cr

Batch	Expected addition
4	Lean Inventory / Operations
6	Finance
7	Market / Competitive
8	Final KPI / QA
